Senior iOS Developer

Job ref: 1167

We are looking for a Senior iOS Developer to broaden our software service offering in multiple industries, IoT and services. You’ll work with UX designers and embedded and cloud platform engineers to design, build, deploy and support iOS apps for our clients. Working principally in Swift, you will have experience working with designers and clients to build innovative products.

Full Details

Role Description

Work with back-end developers, software engineers and UX designers to produce impressive, user-centric and highly-polished user interfaces.

- Champion iOS development within the company
- Taking ownership of code quality
- Mentor junior staff

Minimum Requirements

ESSENTIAL

- Degree educated
- Swift & Objective-C
- XCTest and XCUITest frameworks
- Working in an Agile environment
- Version Control (GIT, SVN)
- TDD

DESIRABLE

- Creativity and a great eye for design
- Beacons and BLE using CoreBluetooth
- Interacting with HealthKit and HealthKitUI
- Working with Apple Watch

Why Cambridge Consultants?

Cambridge Consultants creates exciting and novel breakthroughs in technology and products. We help our clients achieve the kind of game-changing leap forward that will transform their whole business.
At the heart of what we do are talented and motivated multi-disciplinary teams empowered to create cutting edge technologies and systems to solve difficult problems for our clients.

We recognise and celebrate individual talent and we understand the importance of letting individuals be just that. Our people are here to do the best work of their lives and our job is to provide the platform for them to do it. That means letting people pursue the projects that interest them and develop their career in whatever direction they choose.

Recent examples of our work include the development of a web application and user interface to allow end users to specify the geographical locations in which a satellite service is made available, a provisioning and configuration interface for a network of wirelessly controlled robots, a mobile web app for helping diabetic patients interact with a wireless pen injector, a data dashboard for monitoring the status of satellite telecoms network hardware and a dashboard tracking people’s location and context in smart buildings.
